

DCC Process Guide

Level 0

Submission Preparation

Getting started

The Applicant is onboarded to the IASME platform and begins the process.

They start preparing their DCC submission, either independently or with support from a Certification Body or third party.

The Applicant answers the DCC core questions directly on the IASME platform.

Readiness check

The Certification Body ensures the Applicant is ready by confirming:

- They have the most up-to-date documents
- They've reviewed the guidance materials
- They understand what's required (e.g. answers, evidence, data storage, and any critical requirements that, if missing, could result in an automatic fail)

No higher-level option

The Level 0 path does not allow the Applicant to aim for a higher certification level. For that option, they must follow the Level 1-3 process.

Review and clarification

The Applicant and Certification Body meet to review or clarify any answers before submission.

The Applicant submits their completed application on the IASME platform.

Submission

Marking the submission

The Certification Body reviews the submission and marks each question as:

- Compliant
- Non-compliant
- More information needed (in which case, the Applicant provides updates and resubmits)

Final marking

Once all questions are marked as either compliant or non-compliant, the Certification Body submits the results.

Certification

Pass/fail decision

If the Applicant passes, a certificate is automatically issued through the BlockMark system.
